

What if you could predict failures on your Manufacturing Equipment?

This wireless sensor (about the size of an egg), will tell you . . .

- ~ When a pinion bearing is nearing the end of its life
- ~ Which mixer needs maintenance
- ~ Whether a hydraulic pump is running smoothly
- ~ When your machine is going to fail, in many cases, long before you can detect it and before it fails unexpectedly.

Precision Molds for the Concrete Block Industry

Imagine avoiding downtime on your critical equipment by predicting and addressing failures *before* they happen . . .

Your competitors already are, and you can too!

Adding predictive maintenance tools to your machinery is simple, affordable, and smart.

Vibration and temperature monitoring are nothing new, but a wireless technology rugged enough to survive a manufacturing machine? That is *very cutting edge*.

Escape the expenses and dangers of unplanned downtime. Get ahead of failures and your competition with the latest in predictive maintenance technologies.
